Personal summary

Generally, just the man who loves jvm-related things, linux and black tea. But besides the programming and all these computer technologies, I also enjoy to write some stories in prose (which nobody has never seen at the moment), read books, discover myself and dream about the future.

Currently primarily involved in android (and a little bit of scala backend) development. My work experience includes creating different mobile applications from scratch, participating in open-source projects and working within big teams.

Education

Since 2018 Master of Mathematics.

2014 - 2018 Bachelor of Mathematics. Faculty of Mathematics, Mechanics and Computer Sciences, South Federal University (Rostov-on-Don, Russia).

2003 - 2014 Secondary education (Kerch, Ukraine).

Employment

Since 2015 Android developer at *kinoplan.ru*

- Developing android application that helps user to monitor the state of cinema's equipment.
- Developing customizable project to build android applications for selling tickets in a certain cinema or in a group of cinemas. Participating in it's backend.
- Developing backend service that manages FCM message queues.
